

2x Fast Taqman Probe qPCR Master Mix

Fast Activation within 1 min

DESCRIPTION

Tribo™ 2x Fast TaqMan Probe qPCR Master Mix with different ROX levels and package sizes provides a convenient choice suitable for different qPCR instruments. It is a 2x concentrated premix containing Taq DNA polymerase, dNTPs, Mg²⁺, ROX reference dye and PCR buffer components. The proprietary chemical modifications of the enzyme make **PCR hot start activation much faster (less than 1 minute)** than the normal 10 minute activation in standard real-time qPCR amplifications. This confers a significant reduction in non-specific PCR amplification ([please see the diagram in the data sheet](#)). As the enzyme buffer system is optimized for real time PCR, the product offers high amplification efficiency and high detection sensitivity in real-time PCR.

KEY FEATURES

- ❖ Fast: **Only 1 minute** not the normal 5-10 minutes for enzyme activation.
- ❖ Multiple choices: 2x Master Mix with different ROX level can be suitable for different instruments.
