

Poly-L-lysine hydrobromide - M.W:4000-20000, Enzyme Activity

Catalog	Unit
TBP0104-10MG	10 mg
TBP0104-100MG	100 mg

Product Details

Purity: min. 95 %

Chemical Formula: $(C_6H_{12}N_2O_2)_n \cdot (HBr)_x$

Storage: store at <-15°C, close container well

Product Code: FP177958

Catalog No.: 25988-63-0

Description

Poly-L-Lysine hydrobromide is a synthetic polymer that is used as a bacterial sealant, a model system for studying the effects of antimicrobial peptides on cells and as an additive to human serum. It has been shown to inhibit the growth of carcinoma cell lines and it has been used in treatments for leukemic mice. The molecular weight of this polymer ranges from 4000 to 20000. Poly-L-Lysine hydrobromide contains terminal amide groups, which can be cleaved by trypsin, an enzyme found in soybean and human serum. This allows it to act as a carrier molecule for other molecules.
